

## Star Group Sustainability at Jemicy

Dash Savage-Moss

Star Group is making Jemicy School a more sustainable and Earth-friendly school. In the first place, we collect chip bags and juice boxes for TerraCycle. TerraCycle makes chip bags and juice boxes into earth-friendly things. The things TerraCycle makes are sturdy park benches, rugged compost bins, and durable picnic tables. While recycling trucks pick up the thing you put out TerraCycle makes you ship it to them so it's kind of an arm for a leg. In addition, we recycle paper, cardboard, and glass. We collect our school's recycling every Friday. We keep track of what we recycle and make sure everything is recyclable. We recycle every day we have people who collect all the recyclable things at lunch. Most importantly, we use Solar panels so we don't pollute the air. Solar panels are a reliable renewable source of energy. They use energy from the sun to create steady electricity for the school. The solar panels that we use help us with not using as much electricity which makes it so the power plant doesn't have to use so much coal. Jemicy's sustainable efforts mentioned above will make it so we can live on this planet for longer.
