

## **Star group Sustainability**

**Jack Berman**

Star group is promoting the sustainability efforts at Jemicy School. To begin with, the cooperative Star Group collects the recycling from every class and takes it to the big bin on Friday. When we recycle we reuse our garbage so not all of our mess is polluting the Earth. Both the hard-working teachers and the carefree students at Jemicy recycle so we can save trees. In addition to paper, we also recycle glass, cardboard, and all forms of plastic. In addition to recycling, the happy Star Group strives to compost so the food we don't eat isn't wasted. When we do compost we take our fruits and vegetable scraps and put them back into the Earth. In addition to fertilizing the dirt, it gives all types of worms food. We use our compost in our gardens because it helps our plants grow. Finally, smart Star Group is using the least amount of paper as possible so we don't waste trees. We use our computers intill the final draft instead of printing it just so we can see what we have to fix. We use a print relies station in case we print something on axsudint. We use artery use paper so we can use less paper. If you want to save the Earth from ourselves you should do some of these things.
