

## Sustainability at Jemicy

Raife Herling

Here at Jemicy, we like to try to keep the earth green and star group has a huge part in that. The first thing we do here is TerraCycle. Terracycle is a program that takes nonrecyclable items and uses them for park benches and other stuff. Another thing they turn them into is picnic tables. The Terracycle program will take trash down tremendously. We also use rags to clean the tables instead of Clorox wipes. Since the rags are reusable the trash we have goes down tremendously. Clorox wipes are extremely bad for the environment Clorox wipes are also expensive and get used once. Finally, we compost all the stuff people don't eat at lunch like banana peels. You can compost a lot of stuff like apple cores and orange peels. The soil from composting is super-rich in nutrients. That means that we don't have to buy fertilizer and fertilizer is expensive. Do you do any of these things to keep the world green? If you love to go hiking, biking, or camping in the luxurious trails at state parks then you should help the world stay green.
