

## Star Group Sustainability

Sophia

Star Group is very skilled at a lot of things but the thing they are best at is keeping our school nice and sustainable. To begin with, we produce less waste so we save the Earth. We use washcloths instead of Clorox wipes to save the Earth for having too much waste. Once we use the washcloths we wash the filthy dirt off of them and give them back to their owners when they are clean. We also print double-sided if we need to print. The Star Groupers also recycle every Friday in science. "They are so cool!" everyone says. Secondly, we gather everyone's compost at lunch. They use compost for the garden beds outside. Also, the spam-new compost helps the garden club plant their plants and help them grow. The food you don't finish helps the plants grow. How cool is that? Finally, we reuse a carload of paper. We reuse paper by typing instead of writing one paper the whole time. The paper we don't use we use the back of the scrap paper. Also, Star group uses scrap paper to make aesthetic art. Anyone can be like Star Group; you just have to want to save the Earth.
